

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 July 2026
Team ID	23JR1A05E4
Project Name	Metro Ticket Generating System in ServiceNow
Contributor	Shaik Zuveriya Tabassum
Maximum Marks	4 Marks

Context: This is an individual adaptation of the standard team brainstorming template, completed solely by the contributor named above for the Metro Ticket Generating System project in ServiceNow. Brainstorming is used here as a personal ideation and prioritization exercise: capturing volume over value, then organizing and ranking ideas by importance and feasibility.

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

Step 1: Define the Problem Statement

Since this is an individual exercise, there is no team gathering step — the contributor defines the problem statement directly before brainstorming solo.

PROBLEM STATEMENT (How Might We...)

How might we design and implement a ServiceNow-based Metro Ticket Generating System that lets passengers book tickets, calculate fares automatically, and receive a scannable QR ticket — while giving station managers and operations teams reliable data and visibility?

Key Rules Followed (Individual Session)

Stay on topic

Keep every idea tied back to the metro ticketing problem statement.

Defer judgment

Capture every idea first; evaluate feasibility later in Step 3.

Go for volume

More ideas/notes = a richer set to prioritize from.

Encourage wild ideas

Even ambitious features (e.g., analytics dashboards) are worth noting.

Listen to others (reference sources)

Build on the Mural template structure and ServiceNow best practices.

Be visual

Use diagrams/flow visuals to represent the ticketing process.

Step 2: Brainstorm — Idea Listing

Instead of multiple team members each contributing a column of sticky notes, all ideas below were generated individually by the contributor, addressing the problem statement above.

Service Catalog item for ticket booking

Fields: Source, Destination, Passenger Type, No. of Tickets

Automated fare calculation logic

Script-based fare engine using distance/passenger type

QR code generation for digital tickets

Auto-generate QR on order submission

Stakeholder mapping

Passengers, Station Managers, Metro Ops Team, IT Admins

Execution roadmap

Catalog Form → Fare Logic → QR Integration → Station Mapping → UI Pages → UAT & Deployment

UI/UX customization

Dynamic form fields, clean catalog page design

Data migration & security

Secure storage of passenger/order data

Testing

Validate with realistic use cases and sample data

Documentation

Screenshots of catalog UI, QR output, flow logs, annotated visuals

Future scope

SMS ticketing, Email ticketing, payment gateway integration, travel analytics dashboard

| Group Ideas into Clusters

Ideas from Step 2 are clustered into themes below (replacing the team's shared clustering step with individual self-clustering).

Cluster Theme	Associated Ideas
Backend & Logic	• Automated fare calculation logic • Data migration & security
Catalog & UI/UX	• Service Catalog item for ticket booking • UI/UX customization
Ticketing Output	• QR code generation for digital tickets

Cluster Theme	Associated Ideas
Planning & Roles	• Stakeholder mapping • Execution roadmap
Validation & Docs	• Testing • Documentation
Future Enhancements	• Future scope

Step 3: Idea Prioritization

Ideas are plotted on an Importance vs. Feasibility grid to decide what to act on first. As this is individual work, the contributor made these prioritization calls alone rather than through team consensus.

Prioritization Notes

- **High importance & high feasibility:** QR code generation for digital tickets — quick win, core to the deliverable.
- **High importance & high feasibility:** Automated fare calculation logic — central to project functionality.

- **High importance, lower feasibility:** Data migration & security — important but more complex to execute.
- **Lower importance, lower feasibility (for now):** Future scope items (SMS/Email ticketing, payment gateway, analytics dashboard) — parked for later phases.
