Define the Problem Statement

Date	31 July 2026
Team ID	23JR1A05E4
Project Name	Metro Ticket Generating System in ServiceNow
Contributor	Shaik Zuveriya Tabassum
Maximum Marks	2 Marks

Context: This is an individual adaptation of the Customer Problem Statement template, completed solely by the contributor for the Metro Ticket Generating System project in ServiceNow. It captures a single passenger persona's point of view to focus the project on what matters most to the end customer.

Problem Statement Framework

Component	Description & Persona Context
I am	a daily metro commuter travelling between stations for work
I'm trying to	book a metro ticket quickly without standing in long queues
But	the manual counter process is slow, cash-only, and gives no digital or QR ticket
Because	there is no self-service digital ticketing system with automated fare calculation and QR-based verification
Which makes me feel	frustrated and delayed, especially during peak hours

Visual: Problem Statement Flow

Problem Statement Summary (PS-1)

PS-1

Customer: a daily metro commuter travelling between stations for work

Goal: book a metro ticket quickly without standing in long queues

Barrier: the manual counter process is slow, cash-only, and gives no digital or QR ticket

Root Cause: there is no self-service digital ticketing system with automated fare calculation and QR-based verification

Emotion: frustrated and delayed, especially during peak hours

Why this matters

Framing the problem from the passenger's point of view keeps the ServiceNow solution focused on real friction points — long queues, cash dependency, and lack of digital proof of travel — rather than only on internal system features. This directly motivates the Service Catalog booking item, automated fare calculation, and QR ticket generation built into the project.
