

Ideation Phase

Empathize & Discover

Date	31 July 2026
Student ID	23JR1A05E4
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

| Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool that helped me, as the individual developer of this project, better understand the end users of the Metro Ticket Generating System. Creating an effective ServiceNow solution requires understanding the true problem and the passenger experiencing it — this exercise helped me consider the ticket-booking process from the passenger's own perspective, goals, and challenges, before designing the Service Catalog item.

Visual: Empathy Map Canvas

Pain Points

- **Long waiting time in queues:** Standing in long manual queues during peak hours.
- **Manual fare calculation errors:** Human error and confusion at manual counters.
- **No digital ticket option earlier:** Lack of seamless self-service booking.

Gains & Outcomes

- **Instant digital ticket via QR:** Immediate access to travel proof on mobile/portal.
- **Accurate automated fare calculation:** Zero manual calculation errors.
- **Quick self-service booking experience:** Frictionless service catalog workflow.

Key Insight

Passengers value speed, accuracy, and convenience above all. Long queues and manual fare errors are the biggest pain points, while an instant QR-based digital

ticket delivers the highest gain — an insight that directly shaped the automated fare calculation and QR code generation built for this Service Catalog item.
