

FUNCTIONAL & PERFORMANCE TESTING

SZ METRO TICKET GENERATING SYSTEM (SERVICENOW)

Date: 31 July 2026

Developer Name: Shaik Zuveriya Tabassum (Individual Work)

Project Name: Metro Ticket Generating System in ServiceNow (SZ Metro) | Maximum Marks: 100

TEST SCENARIOS & EXECUTION RESULTS

TEST ID	SCENARIO	TEST STEPS	EXPECTED RESULT	ACTUAL RESULT	STATUS
FT-01	Text Input Validation	Enter valid & invalid station combinations in Catalog form.	Valid inputs accepted; same source-destination throws error.	Dynamic alert shown on selecting identical stations.	Pass
FT-02	Number Input Validation	Enter ticket quantities: 0, 3, and 50.	Accepts 1-10 range; blocks invalid/negative numbers.	Validation script restricts input to 1-10 range.	Pass
FT-03	Content Generation (QR)	Provide complete inputs & click "Order Now".	Generates dynamic QR code and calculates exact fare.	Digital ticket with QR code generated instantly.	Pass
FT-04	Flow Connection Check	Trigger Flow Designer action upon request submission.	Flow triggers, calculates fare & logs user data in table.	Flow executed cleanly with zero error context.	Pass
PT-01	Response Time Test	Measure time from submission to QR payload generation.	Total processing time under 3 seconds.	Average response time measured at 1.1 seconds.	Pass
PT-02	Transaction Speed Test	Submit 15 concurrent ticket booking requests.	ServiceNow queue processes all without drop.	All 15 requests created records successfully.	Pass
PT-03	Data Ingestion Load Test	Process bulk passenger ticket logs into database table.	Smooth table ingestion without memory bottlenecks.	Records stored in sys_user_data with correct tags.	Pass

Key Highlights: 100% test scenario pass rate across dynamic fields, error prevention scripts, and automated Flow execution in ServiceNow.
