

PROJECT DEVELOPMENT PHASE

METRO TRAVEL ANALYTICS & PERFORMANCE TEST (POWER BI)

Date: 31 July 2026

Developer Name: Shaik Zuveriya Tabassum (Individual Work)

Project Name: Metro Ticket Generating System in ServiceNow (SZ Metro) | Status: 100 / Phase 1 & 2 Completed

DASHBOARD METRICS & IMPLEMENTATION DETAILS

S.NO.	PARAMETER	IMPLEMENTATION DETAILS & DASHBOARD METRICS
1	Data Rendered	Real-time ingestion of ticket transactions from ServiceNow database table (sys_user_data). Tracks Passenger Type, Source Station, Destination Station, Booking Time, and Fare.
2	Data Preprocessing	Cleaned null values, validated station pair mappings, normalized date-time formats, and auto-generated Passenger Class categories (Adult, Student, Senior Citizen).
3	Utilization of Filters	Interactive slicers for: Station Selection, Time/Date Range, Passenger Category, and Ticket Status (Active/Used).
4	DAX Queries Used	- Total Revenue = SUM(TicketData[Fare]) - Peak Hours Passengers = CALCULATE(COUNT(TicketData[TicketID]), FILTER(TicketData, Hour >= 8 && Hour <= 10)) - Avg Ticket Value = AVERAGE(TicketData[Fare])
5	Dashboard Design	No. of Visualizations: 5 Visuals Hourly Passenger Density Bar Chart Revenue Distribution Donut Chart Peak Station Heatmap Daily Volume KPI Card Concession Ratio Bar Chart.
6	Report Design	No. of Visualizations: 4 Visuals End-to-End Metro Analytics Report: Executive Summary Card Operational Efficiency Line Chart Peak Load Map Revenue Breakdown Matrix.

Analytics Integration: Provides Station Managers with real-time visibility into peak congestion hours, revenue trends, and station capacity.
