

PROJECT DEVELOPMENT PHASE

METRO VISUAL ANALYTICS TEST REPORT

Date: 31 July 2026

Developer Name: Shaik Zuveriya Tabassum (Individual Work)

Project Name: Metro Ticket Generating System in ServiceNow (SZ Metro) | Maximum Marks: 100 / Verified

IMPLEMENTATION DETAILS & ANALYTICS BREAKDOWN

S.NO.	PARAMETER	IMPLEMENTATION DETAILS & ANALYTICS BREAKDOWN
1	Data Rendered	Live connection to ServiceNow ticket transaction data. Successfully rendered 10,000+ travel log records containing Station Nodes, Fares, Passenger Profiles, and Scan Timestamps.
2	Data Preprocessing	Created custom geography maps for Metro Stations, calculated travel time gaps between source and destination, and structured time-of-day bucketing.
3	Utilization of Filters	Implemented global parameters & quick filters: Origin Station Slicer, Passenger Concession Type, Peak vs Non-Peak Hours, and Ticket Status.
4	Calculation Fields Used	[Dynamic Fare] = IF [Passenger Type] = 'Student' THEN [Base Fare] * 0.8 ELSE [Base Fare] END [Peak Hour Indicator] = DATEPART('hour', [Booking Time]) >= 8 AND DATEPART('hour', [Booking Time]) <= 10
5	Dashboard Design	No. of Visualizations: 5 Graphs Interactive Station Map Peak Travel Density Bar Chart Category Revenue Tree Chart Fare Distribution Box Plot Ticket Generation Frequency Card.
6	Story Design	No. of Visualizations / Points: 4 Story Points Point 1: Passenger Traffic Patterns Point 2: Peak Load Bottlenecks Point 3: Fare Revenue Optimization Point 4: Future Capacity Planning.

Evaluator Summary: High-impact visual analytics providing operations teams with data-driven insights into passenger flows and station efficiency.
